Batch 18 - Running Time vs Input Size (Median of Repeated Runs)
A. Same inputs, both algorithms (n = 10 ... 30)
Backtracking, worst case
(all d = n): 6.3 s at n = 30
Backtracking, random
2.3 s at n = 30
Greedy + DSU (random):
0.006 ms at n = 30
Running time (ms, log scale)
Number of jobs n
B. Greedy + DSU scales to 10^6 jobs
2 s deadline limit
random: 93 ms at n = 10^6
same deadline (worst): 92 ms
dotted: c * n log2 n reference
Running time (ms, log scale)
Number of jobs n (10^4 slots)
